Education

2020 - 2024

B.Tech IT

VSB Engineering College

Skills

- Language & Technology - ReactJS, React Hooks, Redux, NodeJS Web Technology -
- HTML5, JavaScript, CSS, BootStrap
- Tools/Utilities - Visual Studio
- Version Control Systems – GITHub

About Me

Enthusiastic and detail-oriented Full-Stack Developer with strong foundational knowledge in front-end and back-end technologies. Looking to join a dynamic organization where I can contribute to real-time projects, learn industry best practices, and grow my career in software development.

Experience

Full-StackTraining — OCTOBER 2025 - PRESENT

KALVI KARUR

Currently pursuing Full Stack Web Development training through Naan Mudhalvan – Kalvi Karur, focusing on frontend development, backend APIs, database handling, version control, and real-time project implementation.

Full-StackTraining — NOVEMBER 2024 - JUNE 2025

CRUD Academy

I recently completed a certified course in Full-Stack Web Development at CRUD Academy, where I learned to build end-to-end web applications using React.js, Node.js, Express.js, and MongoDB. The course covered core concepts such as RESTful API development, frontend UI design, database modeling with Mongoose, and version control with Git. I gained hands-on experience through real-time assignments and live projects, which allowed me to apply theoretical knowledge in practical development scenarios and strengthen my skills as a full-stack developer.

Projects

Authentication Module (Login/Signup) – MERN Stack

- Developed a secure user authentication system using Node.js, Express, MongoDB, and JWT for token-based access. Implemented
- form validation, password encryption with bcrypt, and managed sessions for login persistence. Designed a responsive and user-
- friendly frontend with React.js, seamlessly integrating backend APIs via Axios for real-time communication.

Blog Application – MERN Stack

- Built a dynamic blog platform that allows users to create, edit, delete, and view posts.
- Used Mongoose to define and manage MongoDB schemas for users and articles.
- Created reusable UI components and set up React Router for smooth navigation.
- Enhanced user experience by adding features like timestamps, search filters, and user-specific content visibility.

To-Do List API – Node.js + MongoDB

- Developed a RESTful API backend to manage to-do tasks with complete CRUD operations.
- Used Express.js for building routes and Mongoose for efficient interaction with the MongoDB database.
- Tested endpoints thoroughly using Postman, implemented error handling, and ensured proper status code responses.

TNSTC Web UI – React.js

- Built a responsive frontend interface replicating the TNSTC (Tamil Nadu State Transport Corporation) website using React.js, HTML5, and CSS3.
- Focused on delivering a clean and user-friendly UI with reusable components and structured layout.
- Integrated mock data to simulate features like bus search, schedule display, and route listings, mimicking a real-world transport system.

CRUD Academy Web UI – React.js

- Developed a student-facing dashboard for an online learning platform using React.js and Bootstrap.
- Implemented key features including course listings, student login, and enrollment workflows.
- Ensured the UI was mobile-responsive and optimized for various devices, enhancing the user experience for learners.

Project Responsibilities

- Designed, developed, and tested full-stack features across multiple projects.
- Built reusable React components with Hooks and Context API for state management.
- Developed backend APIs using Node.js/Express, integrated with MongoDB.
- Used Git & GitHub for version control, and Postman for API testing.
- Collaborated in team-based projects, followed Agile practices, and participated in code reviews.
